Quantized black holes, their spectrum and radiation

Iosif B. Khriplovich

Budker Institute of Nuclear Physics, Novosibirsk, Russia

Abstract. The maximum entropy of quantized horizon is demonstrated to be proportional in the classical limit to its area. The general structure of the horizon spectrum is derived. The discrete spectrum of thermal radiation of a black hole fits the Wien profile. The natural widths of the lines are much smaller than the distances between them. The total intensity of thermal radiation is estimated.

Additional Information

The seminars are given in the ISDC "Pavillon" building
Address: ISDC Data Centre for Astrophysics, ch. d'Écogia 16, CH-1290 Versoix
WWW: ISDC Seminars: <http://isdc.unige.ch/?Science+seminars>
