JEM-X

ISGRI

SPI

PICsIT

Cross-calibration

Conclusions

## CONCLUSIONS

- JEM-X
  - JEM-X 2 well calibrated in OSA 5.1
  - JEM-X 1 needs response files for Revs.  $> 300$
  - wrong spectral shape in OSA 6.0, under investigation

JEM-X

ISGRI

SPI

PICsIT

Cross-calibration

Conclusions

## CONCLUSIONS

- ISGRI

- relatively well calibrated in OSA 5.1 (2-3%)
- important changes in OSA 6.0 (energy calibration, LUT 2 table, Nomex correction)
- new set of response files needed for OSA 6.0
- too large spectral slope assumed for ARF modeling

JEM-X

ISGRI

SPI

PICsIT

Cross-calibration

Conclusions

## CONCLUSIONS

- SPI

- very good calibration made on ground
- residuals observed below 35 keV (3%)
- spectral hardening and bumps at high energy (electronic noise, background modeling)

JEM-X

ISGRI

SPI

PICsIT

Cross-calibration

Conclusions

## CONCLUSIONS

- PICsIT
  - very good calibration up to  $\sim$ 1 MeV
  - standard software produces spectra of rather low quality
  - better instrument model (PIF) needed above 1 MeV

JEM-X

ISGRI

SPI

PICsIT

Cross-calibration

Conclusions

## CONCLUSIONS

- Cross-calibration

- Too steep spectra from ISGRI
- JEM-X, ISGRI and PICsIT absolute normalization about 5%, 20% and 20% below SPI
- very good agreement between SPI and PICsIT spectral slope up to  $\sim 900$  keV
- overall agreement with CGRO Crab results up to 1 MeV
